PARTNER RELATIONSHIPS

BEYOND SCALE: How to make your digital development program sustainable
PARTNER RELATIONSHIPS

MODULE SUMMARY

Whether you’re an NGO or a social enterprise, you may have reached a point in your digital development program where some of your partnerships are working and others need to be reevaluated. As digital development solutions scale, transition ownership or develop new business models, their dependence on partnerships tends to increase, as does the complexity of these relationships.

Organizations often need to identify new technical solution partners, engage in deeper partnerships with government, and strike new commercial relationships. For example, you may be trying to transition your digital tool or service to government while simultaneously renegotiating with mobile network operators (MNOs) for cheaper network access time, with commercial vendors for cloud hosting and with both for higher levels of technical support.

Identifying which existing partner relationships need to be extended and renegotiated, and where you have partnership gaps, is important to do early, as these negotiations can take years.

Partnerships are effective when the value proposition to each partner is clearly defined in the beginning and reflected in written agreements. Creating partner structures and communication channels will allow you to continually reassess what is working — or not working — in the relationship and make it easier to realign partners’ contributions as needed.
This module explores ways in which the mix of partners and the intensity of their engagement changes on the journey to scale and sustainability. It is based on interviews and conversations with digital development leaders at organizations including BBC Media Action, Esoko, Jembi Health Systems, International Center for Research on Women (IRCW), HealthEnabled and Digital Green.

The steps below aim to help you review your external partnerships, and identify new partners, who you might need to achieve scale and sustainability.

**This module provides guidance from digital development implementers on how to:**

- **1** Assess your digital program’s existing partnerships
- **2** Identify potential new partners
- **3** Update agreements and revise your governance structure
- **4** Transfer knowledge to your partners
Key steps

1. **ASSESS YOUR DIGITAL PROGRAM’S EXISTING PARTNERSHIPS**
   - Map your partners’ roles and responsibilities against yours
   - Assess your existing partners’ combined abilities to meet new demands

2. **IDENTIFY POTENTIAL NEW PARTNERS**
   - Assess the skills and capacities of potential new partners
   - Identify the incentives for them to participate
   - Assess whether more resources are needed to manage a growing consortium of partners

3. **UPDATE AGREEMENTS AND REVISE GOVERNANCE STRUCTURES**
   - Review and renegotiate your existing contracts
   - Clarify and document mutual goals with new partners
   - Revise your governance structure

4. **TRANSFER KNOWLEDGE TO YOUR PARTNERS**
   - Develop plans for transferring knowledge and building capacity
   - Update the way you measure partner performance
   - Refine mechanisms for partner feedback and communication
STEP 1

ASSESS YOUR DIGITAL PROGRAM’S EXISTING PARTNERSHIPS

Map your partners’ roles and responsibilities against yours

Some organizations find that creating a map of existing partners and stakeholders is a useful exercise. It can help you clarify current roles and responsibilities and identify overlaps and gaps based on your future strategy, business model and roll out plans. It may also help you systematically challenge your assumptions about who should do what or identify areas where new partnerships might strengthen your efforts and enable greater scale and sustainability.

Implementers interviewed for this guide note that a partnership map is also a useful tool for beginning a dialogue with your existing partners about the next phase. Proactive conversations with partners before you begin your expansion or transition can help ensure shared understanding of expectations and value propositions. They can also help identify less tangible issues that often derail partnerships, like differences in work cultures and unspoken goals.

Assess your existing partners’ combined abilities to meet new demands

After you’ve completed a partnership map, you can do a gap analysis to identify whether you have the right partners with the necessary skills and capabilities to take your digital solution to the next stage. This exercise will answer questions such as: Can your digital solution handle two to three times the current call volumes or transactions? If not, are your technical partners capable of scaling your digital solution to meet stakeholder needs? Do they have the local resources to support the digital solution at scale, meeting stringent service level agreements (SLAs)? Do they have a physical presence in your expansion geographies? Do they have the local knowledge required for effective marketing and sales?

Proactive conversations with partners are essential, but a thorough assessment also draws on desk research and expert third-party analysis where possible. In some circumstances, it may be worth going through a competitive procurement process to determine whether your existing partners still offer the best value for your money, particularly if you may be asked to justify your choice of partners to government or private-sector stakeholders in the future.
In practice | Digital Green
Watch Rikin Gandhi from Digital Green talk about how they used digital tools to create a sense of ownership among partners.

Other examples
- Jembi Health Systems, a health technology NGO, found while planning the scale-up of a project for the South Africa National Department of Health that it needed to partner with a national help desk to offer referrals to patients — something that was outside Jembi’s expertise and capacity. After reaching a partnership agreement with a national help desk, the program began promoting the help desk number in its messaging.

IDENTIFY POTENTIAL NEW PARTNERS

Assess the skill and capacity of potential new partners

After carrying out a gap analysis to identify the skills and capacities that you don’t have but need for the next phase, it’s time to identify and evaluate possible new partners. To evaluate new solution and service providers, you could send out a request for information (RFI) to a long list of potential vendors. An RFI is a great way of assessing what’s available in the marketplace and will help you develop a more comprehensive request for proposal (RFP) or request for quotation (RFQ).

As part of this process, you can ask potential vendors for customer references so you can get third-party perspectives on their service quality and reliability. Ask them to provide summary CVs or biographies of the staff they will dedicate to your project and request interviews with key people to ensure a good cultural fit and rapport with your teams.

On the other hand, if you need to find partners to adopt your digital solution — such as government or a fast-moving consumer goods company — or to share costs and revenue to make your solution sustainable, you may want to do a landscape analysis to identify potential partners in a specific sector and geography.

The annual reports and public filings of large, publicly owned companies such as MNOs can provide useful data on how much revenue they make from different channels, products and services and give you insights into their priorities. For example, have they already invested in value-added services for low-income populations? Or are they more focused on data services for urban customers? You may also be able to identify network costs and profit margins from their annual reports which will be useful if you’re trying to negotiate discounted price points for services or an increased revenue share.

For any prospective partner, getting a sense of their current relationships is important. Do they support other digital development programs? If yes, who are their key partners? Meet with these partners to understand the scale and complexity of their programs and the level of investment that they’ve secured.
In practice | Esoko

Strong MNO partnerships can make a big contribution to scale

We have partnerships with a number of different organizations that have helped us expand the services we offer and make them more interesting to our farmers. We partnered with Vodafone in Ghana to create the Vodafone Farmers’ Club to allow users to pay for farming tips and market information with mobile phone credit. This made it easy and more comfortable for farmers to use our service, since they were already using mobile credit to purchase other value-added services. As a result, farmers were more willing to pay for our service, which made our revenue forecasting easier.

Partnerships with MNOs have also helped us scale our services efficiently. We operate an in-house call center, but our MNO partners manage our voice lines. Since this is part of their core business, they already have the technical skills needed to manage voice lines at scale and can handle issues much faster than we can. Similarly, in periods of high demand for our services — when there is a crop disease outbreak and many farmers are calling for advice — our MNO partners have the infrastructure to scale up the number of voice lines we need immediately. We leverage the existing scale of their operations and the methods they use to deliver their own services in order to deliver ours.

▶ Business Model: STEP 4. FORECAST THE REVENUE FOR YOUR DIGITAL PROGRAM

Other examples

▶ The South Africa National Department of Health provides program coordination for the activities of over 20 NGO and donor partners delivering targeted mobile messages for pregnant mothers via MomConnect. Partners provide services ranging from software and content development to customer support and outreach. The program has scaled to serve over a million pregnant women across the country. Read more about the partnerships here.

▶ Digital Green looks for three main attributes in field partners who use videos to support their agricultural programs: domain expertise in agriculture, current scale and expansion plans and whether they have strong community links supported by dedicated staff. Over time, it found that many partners were not always aware of the latest technologies and knowledge emerging from research. Digital Green plugs these gaps by pairing its partners with domestic and international research organizations that want access to field-based data from NGOs and government agencies. Both types of organizations benefit from these two-way exchanges of technical know-how and farmer feedback and they also strengthen the Digital Green network.
Identify the incentives for them to participate

The next phase of your digital intervention may rely heavily on strategic partnerships with the private sector, government or both. Identifying what partners might want from the relationship — and whether your needs are aligned — is critical.

For example, does your strategy rely on government procurement, distribution, and support for software, hardware, devices and connectivity? If yes, this is a big ask, and it’s vital to identify and quantify the benefits. You may need to establish that your digital solution is more cost-effective than the alternatives and prove that it can reach scale and still be manageable and cost-effective. Alternatively, your strategy may rely on renegotiating partnerships with MNOs to reduce costs or get discounted pricing for voice calls or data. This will only succeed if you understand their business goals and appeal to them by offering a tangible benefit.

FOR MORE INFORMATION SEE:

- Business Model: STEP 3. IDENTIFY WHO IS GOING TO PAY FOR THE NEXT PHASE
- Solution Design: STEP 4. PLAN YOUR TECHNICAL DEVELOPMENT FOR SUSTAINABILITY AT SCALE

You may need to establish that your digital solution is more cost effective than the alternatives and prove that it can reach scale and still be manageable and cost effective.

Assess whether more resources are needed to manage a growing consortium of partners

While small programs regularly use core staff time to manage partners, rapidly expanding programs may require a dedicated individual or even a separate organization to coordinate the efforts of a growing consortium of partners. This can entail creating a project management office (PMO) to manage day-to-day interactions and coordinate partner activities during program implementation. For programs where ownership is being transitioned, this PMO may involve participation by the original owner, at least initially. A PMO can also play an important role in knowledge transfer between partners. The costs of managing more partners should be weighed against the benefit they bring in filling specific gaps in capacity and expertise. This will help you make strategic decisions about whether to bring on new partners or develop the capacity in-house.
How to

- Read more about partnerships in digital development and the role of PMOs here
- View a go/no-go decision checklist used to assess the costs, risks and value of partnerships here
Review and renegotiate your contracts

Some digital development programs outgrow the agreements or contracts that were created when the programs first started. Service level agreements (SLAs) are a good example. You may not have signed SLAs with your technical partners at the pilot stage, or you might have agreed to slow response times to accommodate time zone differences or limited staff resources. Now that you’re scaling or transitioning, you may be legally obligated by your MNO partners or government to sign stringent SLAs — which could, for example, reduce response times from 4 hours to 30 minutes. As a result, you’ll either need to renegotiate the SLA with your existing partner or identify a new partner who’s able to support your digital solution at scale. Some programs simply outgrow their partners, and must make tough decisions to release old partners and find new ones that better fit the next phase.

Some digital development programs outgrow the agreements or contracts that were created when the programs first started.

Clarify mutual goals and constraints with partners

Misalignment between partners’ motivations can create challenges later. This is especially true for digital development projects, which often include NGOs, large private sector corporations (such as MNOs) and governments. Each of these stakeholder groups has different incentives for participating and metrics for success. Getting mutual clarity on these drivers and the limits around each organization’s participation helps minimize the potential for future conflict and maximize the contribution each can make.
**In practice | BBC Media Action**

**How we negotiated scalable pan-India agreements with six MNOs**

We negotiated pan-India agreements with six MNOs, even though we only had funding to launch our mobile health services in one state. This is because we wanted to be ready to scale quickly if the services were successful.

We agreed the same, significantly reduced tariffs with all MNOs, which we knew our target audiences could afford, but would still cover MNOs’ network costs. We also agreed on common short codes and MNO marketing commitments, including promotion via digital channels and thousands of top-up shops.

In exchange, MNOs retained most of the revenue. We split the remainder with our aggregator to help cover costs. The revenue was too small to motivate MNOs. Instead, they saw value in our plans to build sustained, meaningful relationships at scale with a yet unsaturated target market — i.e. rural women, supported by our digital track record and BBC brand.

MNOs dictated the structure of our agreements, which varied from one-to-one agreements, to tripartite agreements with our aggregator, to ‘piggy backing’ on our aggregator’s existing MNO contracts. When it came time to scale, we signed addendums to our ‘master’ agreements, negotiating functional and commercial changes, but sticking to the same legal terms. This significantly reduced negotiating time.

---

**Other examples**

In the **Philippines**, the Department of Health and the Department of Science and Technology made progress on the implementation of a national digital health plan. This is when they signed a memorandum of understanding (MOU) to create a steering committee and technical working group with defined roles for each national agency. The agreement led to a health information exchange (HIE) being established to allow interoperability between the country’s various digital health solutions. It has been cited by other countries in the region as a model for creating HIEs. See the MOU [here](#).
If you’re not ready to sign a formal contract with a new partner, you could agree to a memorandum of understanding (MoU) instead. MoUs spell out shared goals, the scope of work, roles and responsibilities and an agreed course of action. This can set the stage for negotiating a contract later.

Good governance documentation clearly defines each partner’s commitments and roles and responsibilities, and describes the structure of the intervention.

Revise your governance structure

In the early stage of your intervention, you may have found that a simple, informal program structure allowed for flexibility and quick decisions. But as you move into the next phase, especially one involving an ownership transition, documenting roles and responsibilities is critical.

Good governance documentation clearly defines what each partner is committed to doing (based on MoUs and other agreements), defines the relationships between them, and clarifies authority, decision-making and issue resolution processes. Once you’ve defined and documented your governance structure, you could codify and communicate these responsibilities in a program charter to ensure that they are formally recognized and agreed.

Governance structures are often based on MoUs and contractual agreements. The roles and responsibilities they involve are often expressed in a RACI table. RACI stands for responsible, accountable, consulted and informed, and a RACI table depicts all the activities and roles in an organization or consortium. Once you’ve defined and documented your governance structure, codify and communicate these responsibilities in a program charter to ensure that they are formally recognized and agreed.
Other examples

Rwanda’s digital health governance structure is typical of a multisector digital development initiative led by government. It includes a steering committee of ministerial-level representatives from relevant health and ICT bodies who guide strategic decision making, a technical working group to sort through technical challenges and make recommendations and an eHealth program management unit responsible for executing decisions and day-to-day implementation. Learn more about their governance structure here.

Watch Amajit Mukherjee from the International Center for Research on Women (IRCW) talk about strategies to engage government stakeholders and support ownership transition.

Listen to Annie Neo Parsons from Jembi Health Systems talk about setting up a structure to work with government partners here.

Many challenges will arise on the path to scale and transition. Some of these will be internal — such as changing key staff and partners — and others will be external — such as new or disruptive technologies and competitors. Only by defining a clear governance structure and assigning specific roles to individual organizations can multi-partner programs overcome the inevitable roadblocks. Decision makers, reporting structures and escalation procedures must be defined and agreed upon with each partner. This example illustrates one such governance structure.

A robust approach to governance can mean the difference between success and failure
Documenting the roles and responsibilities of each entity in your governance structure (each box in the diagram here) in consultation with participating members ensures that each partner understands and accepts their responsibilities, and agrees to engage the human resources required to fulfill their commitment to the partnership. Governance documentation, which could be formalized as an MOU or a program charter, typically includes:

- **Background**: Why is the governance structure being created?
- **Scope and purpose**: What are the objectives of the program and scope of work?
- **Composition**: Who is involved and what skills and experience do they have?
- **Roles and responsibilities**: What are the specific functions of each partner?
- **Frequency of meetings**: How often do the different governance bodies meet?
Develop knowledge transfer and capacity development plans

Capacity development and knowledge transfer is not just for staff. Partners both old and new need it too, especially when there is a transition of ownership. Implementing organizations have found it useful to agree to a knowledge transfer plan with new partners, including government departments. Knowledge transfer plans involve proactively sharing and discussing documentation with partners, preferably in a series of face-to-face workshops.

The expansion of some digital solutions may require significant new or refresher training for partners, such as mobile top-up shop owners, who are involved in marketing and selling the solution. Many implementers note that while the cost of training partners can equal or exceed that of training internal team members, it can reduce customer service costs by improving partners’ ability to communicate effectively about the solution to end users. Involve partners in developing your capacity development plan and see which of their existing training structures you can tap into.

Note that careful consideration of knowledge transfer and capacity building plans is advisable in situations where your partner could eventually become your competitor.

Update the way you measure partner performance

Based on MoUs, contracts and implementation plans, each partner’s performance — including your own — will be measured against agreed deliverable milestones and established metrics. As your program goals evolve and your rollout plans change, these metrics are likely to change. It may be useful to hire an external consultancy or audit firm to review progress and provide objective feedback about program partnerships. It’s often easier to share concerns and frustrations with a neutral, trusted external party than with a member of a partner consortium.

In practice | BBC Media Action

Why a Program Management Unit (PMU) was established to support our national scale up

When we first developed our mobile health education services in India, we worked closely with state governments on strategy and messaging and training, but procured and delivered independently. This changed when we scaled to more states, where we successfully supported local governments in procurement, including contracting MNOs. This proved incredibly time consuming.

We learned that government is unlikely to prioritize scant resources for your project unless you walk the corridors of power every week. Government bureaucrats listen to a lot of NGO pitches, and know that NGOs come and go. We had to constantly engage to demonstrate seriousness and staying power.

Thus, when the Government of India decided to scale two of our mobile health education services nationally, we knew we needed a new governance structure. A project management unit (PMU) staffed by PricewaterhouseCoopers (PwC) was set up with support from the Bill & Melinda Gates Foundation to act as the single point of contact for the Ministry of Health, and to liaise between government and a consortium of partners lead by BBC Media Action.

PwC brought invaluable government procurement and relationship management experience to the PMU, which gave us more time to focus on scaling the services. Three months after the launch, PwC made their planned exit and we became the single point of contact for the Ministry.

Refine mechanisms for partner feedback and communication

Just as communication and feedback mechanisms are important for staff members, they are also essential for your partners. Partnerships require active and predictable channels for communication.

A robust project plan will include a communications plan, which details the frequency of partner meetings or calls and includes templates for progress reports and agendas, responsibility for drafting agendas and taking and circulating minutes and which online collaboration tools will be used. Identifying a single point of contact within each organization is also vital. If in-person meetings will be required, you’ll need to be clear about who is expected to pay for meeting and travel costs and the level of representation required of each partner.

FOR MORE INFORMATION SEE:

➤ Roll Out: STEP 1. BUILD PROJECT MANAGEMENT FOUNDATIONS FOR SCALE
Other examples

- It’s important that all partners can articulate the shared goals and values of the program. Shared communication materials or assets can help with this. In Ethiopia, Vital Wave created a frequently asked questions (FAQ) document to help stakeholders in the Federal Ministry of Health communicate a shared vision for a digital system to manage national health indicators. See the FAQ here.

- When training partners, Digital Green used to focus only on technical skills and capacity building on its video-enabled approach. They have since taken a more systems-based approach to transform extension programs from the inside out. In Ethiopia, for instance, the organization partnered with local agricultural universities to create a new curriculum at schools where agricultural extension workers are trained. This enabled a broader institutional impact that is more sustainable and replicable.

How to

- Read more about building and sustaining effective collaborations here
- See some digital tools for coordinating partnerships here

A robust project plan will include a communications plan, which details the frequency of partner meetings or calls and includes templates for progress reports and agendas, assignments for drafting agendas and taking and circulating minutes and a list of which online collaboration tools will be used.
RESOURCE ROLLUP

Who do you need?
Assessing your current partnerships and determining new partnership requirements will involve tapping into your organization’s resident knowledge. You may need to have multiple rounds of discussion with current and potential partners. It also entails making smart use of outside advisors and experts. These people can provide unbiased perspectives about setting up partnerships, which will help your program scale instead of holding it back.

Pro tips
• **Get beyond the day-to-day with partners.** When program implementation is in full swing, communication can end up limited to operational topics. Implementers say finding regular venues for strategic discussions is an ingredient to long-term success.
• **Don’t bloat your governance structure.** It’s tempting to make stakeholders feel valued by offering them a role in governance, but including too many organizations and people can lead to slow and convoluted decision-making processes. Advisory bodies can allow for inputs by all the partners involved without slowing down progress.
• **Keep your partners on message.** Making sure your partners have the right technical knowledge and strategic priorities is important, but so is ensuring they are aligned in how they communicate your program’s value.
